

PhD course

Medical Geobiology: Evolutionary processes affecting health

Course info

11th -15th of August 2025
UCPH. Globe Institute

The interface where rocks and environmental processes meet modern medical science!

Learn how evolutionary forces shape health outcomes across scales—from microscopic biofilms and cancer cells to plastic pollution, and the global spread of diseases.

Equip yourself with an evolutionary lens and help unravel complex health challenges. We will work with antibiotic resistance, cancer, and pollution within the integrative framework of geobiology.
